

Q:3 What are coral reefs?

Ans: Coral reefs: Corals are formed from the secretion produced by specialized polyps that are present in certain coelenterates. These polyps are covered by the stony cups due to the hardening of their secretion. From the mouth of the stony cup a polyp can pass out its tentacles for feeding and withdraw it when not feeding. Most such coelenterates are colonial. Living polyps are found in the surface layer of corals. However on the lower side and at the base are present masses of dead stony structures called coral reefs. These are mostly formed of calcium carbonates (Lime-stone).
