Ochiai,K. Omine,J. Otani,N. Yasufuku,2001-01-01 Earth reinforcing techniques are increasingly becoming a useful powerful and economical solution to various problems encountered in geotechnical engineering practice Expansion of the experiences and knowledge in this area has succeeded in developing new techniques and their applications to geotechnical engineering problems In order to discuss the latest experiences and knowledge and with the purpose of spreading them all over the world for further development the IS Kyushi conference series on the subject of earth reinforcement have been held in Fukuoka Japan every four years since 1988 This fourth symposium entitled Landmarks in Earth Reinforcement is a continuation of the series IS Kyushu conferences and also aims at being one of the landmarks in the progress of modern earth reinforcement practice The first volume contains 137 papers selected for the symposium covering almost every aspect of earth reinforcement The second volume contains texts of the special and keynote lectures      Accelerated Bridge Construction Mohiuddin Ali Khan,2014-08-12 The traveling public has no patience for prolonged high cost construction projects This puts highway construction contractors under intense pressure to minimize traffic disruptions and construction cost Actively promoted by the Federal Highway Administration there are hundreds of accelerated bridge construction ABC construction

programs in the United States Europe and Japan Accelerated Bridge Construction Best Practices and Techniques provides a wide range of construction techniques processes and technologies designed to maximize bridge construction or reconstruction operations while minimizing project delays and community disruption Describes design methods for accelerated bridge substructure construction reducing foundation construction time and methods by using pile bents Explains applications to steel bridges temporary bridges in place of detours using quick erection and demolition Covers design build systems boon to ABC development of software use of fiber reinforced polymer FRP Includes applications to glulam and sawn lumber bridges precast concrete bridges precast joints details use of lightweight aggregate concrete aluminum and high performance steel

### **Shored Mechanically Stabilized Earth (SMSE) Wall Systems Design**

**Guidelines** Kimberly Finke Morrison, 2006 As a Federal Highway Administration design reference for highway projects this report was prepared to enable the engineer to identify and evaluate potential applications of shored mechanically stabilized earth SMSE walls Included in this design guideline are a literature review on similar construction and the results and interpretation of field scale testing centrifuge modeling and numerical modeling of an SMSE wall system Results of the centrifuge modeling and field scale testing show that reduction of the reinforcement length to as little as 25 percent of the wall height  $0.25H$  provides sufficient wall stability even under a considerably high degree of surcharge loading Using the results of the modeling and field testing research this design guideline recommends a minimum reinforcement length equivalent to as little as 30 percent of the wall height  $0.3H$  for the MSE wall component provided that the MSE reinforcement length is greater than 1.5 m The benefit of attaching reinforcement to the shoring wall is found to be small and is generally not recommended except by way of the upper two layers of reinforcement If possible these layers of reinforcement should overlap the shoring wall and have a total length of  $0.6H$  If this is not possible then these layers should be attached to the shoring wall Internal design requirements of the MSE wall component for an SMSE wall system differ from that of a traditional MSE wall Equations presented in this design guideline have been developed specifically to address these requirements The benefits of increased retaining abilities provided by the shoring wall such as reduction in lateral load acting on the MSE wall component and contribution to global stability are considered in the design process
