First Semester Exam Practice Test

Multiple Choice - Choose the answers that best answers the questions below. Whenever necessary use the acceleration due to gravity = $g = 10.00 \text{ m/s}^2$. Think of everyone around you and all the people cheering you on. You just have to try! You will surely accomplish your goal. (2 pts each)

(1-2) A ball is struck at time $t = 0$ and follows the parabolic path shown in the diagram. The following graphs show quantities possibly associated with the motion as a function of time t . Assume that air resistance is negligible and that the positive directions are upward and to the right.

1. Which graph represents the horizontal component of the velocity of the ball?

x-direction: acceleration = 0

E

2. Which graph represents the vertical component of the velocity of the ball?

y-direction: velocity initially "+" then "0" at peak then "-" as it falls

D

3. An object with initial velocity v_0 , as shown in the diagram, slides up and down a long, frictionless, incline plane. Which of the following is true of the object as it moves?

A) It has constant acceleration while moving up the plane and a greater acceleration when moving down the plane.

B) It has constant acceleration while moving up the plane and a smaller acceleration when moving down the plane.

C) It moves with a constant velocity both up and down the plane.

☒ D) It has the same acceleration as it moves up and down the plane.

The only two forces applied are gravity & Normal force which are the same throughout the entire incline. So acceleration will be constant.
