A Circuit Design for a Motor-speed Controller of High Precision ,1978 A design for a motor speed controller of low cost and high precision is presented It makes possible the regulation of the rotation speed of a series wound electric motor to an accuracy of 1 5 rpm over the range 15 to 5000 rpm The design incorporates a digital display of the rotation speed and provides for the programming of the speed by an external voltage source

Electric Motorcycle Hans Goodnow,2023 As members of the Saxon Restoration Club we chose to make an electric motorcycle We chose a 2005 Kawasaki Ninja for foundation of our project First we stripped to frame down removing the motor gas tank and all the plastics After multiple different design choices we went with a design that that has separate motor and controller mounts Multiple CAD drawings were created to get a solid layout of the electric bike We used Fusion360 to run multiple stress tests on our 3D drawings We obtained a 72V battery that is compatible with our 3000W brushless DC motor kit that will be used to power the bike After getting steel we constructed a battery cage and attached it to the bike frame This involved cutting and welding the steel together then adding connections in such a way that it could be bolted to the original tabs on the bike The controller was then bolted to the front of the cage We fabricated a motor mount that was separate from the battery controller mount for the vibration reduction on the battery We created a new front sprocket that uses the old back sprocket but has the same gear ratio as the electric motor kit Once the sprocket was made we could line up where the motor would have to be

mounted and attached it to the bike frame After all the hardware was in place we wired the motor controller and reattached the seat and rear plastics **The Electric Power Club Handbook on Controllers for Electric Motors** Electric Power Club,1926
