ELECTRIC CHARGE

- _____ 1. What do you call the tiny particles that make up matter?
- electricity
 - atoms
 - electrons
 - charges
- _____ 2. Atoms are made up of protons, neutrons, and what third particle?
- charges
 - electricity
 - electrons
 - forces
3. What three types of charge can an object have?
- _____
- _____
- _____
4. What does the law of electric charges state?
- _____
- _____
5. Protons are _____ charged.
6. Electrons are _____ charged.
7. The force between charged objects is a(n) _____.
8. What two things affect the size of the electric force?
- _____
- _____
9. The region around a charged object where an electric force is exerted on another charged object is the _____.
10. How do charged objects within an electric field interact?
- _____

MEASUREMENT OF CAPACITY 38 Measurement of Capacities Whether the dielectric of a condenser is solid or fluid the capacity is modified by conduction and by dielectric hysteresis and is some function of the time of charging and the time between charging and measurement Where these conditions are of any magnitude the capacity can be closely determined only by some method making use of rapid periodic charging and discharging The direct conductivity of a condenser may be determined by the galvanometer as in ordinary insulation tests Furthermore the capacity of the wires used in connecting up the condenser may be of such magnitude as compared to the capacity to be measured as to render it necessary to determine their capacity separately and subtract it from the observed capacity to give the true capacity of the condenser In the electromagnetic system a capacity has the same dimension as the quotient of a time divided by a resistance hence the suitable measurement of a time and a resistance will determine a capacity If the time be measured in seconds and the resistance in c g s units the capacity will be expressed in c g s units while if the time and resistance be measured in seconds and ohms respectively the capacity is given in farads An application of this principle is shown in Fig 35 where x and y are the coils of a differential galvanometer and T a tuning fork contact maker charging and discharging the condenser h at a known frequency The condenser charges at the battery pressure and discharges through the coil y Coil x is constantly excited by a shunt current Now if the resistances ab and be are so chosen that the galvanometer does not deflect and if we let i j resistance of ab R2 resistance of ac Bg ELECTRIC CIRCUITS NARAYAN CHANGDER,2024-02-27 Note Anyone can request the PDF version of this practice set workbook by emailing me at cbsenet4u gmail com You can also get full PDF books in quiz format on our youtube channel <https://www.youtube.com/SmartQuizWorld> n2q I will send you a PDF version of this workbook This book has been designed for candidates preparing for various competitive examinations It contains many objective questions specifically designed for different exams Answer keys are provided at the end of each page It will undoubtedly serve as the best preparation material for aspirants This book is an engaging quiz eBook for all and offers something for everyone This book will satisfy the curiosity of most students while also challenging their trivia skills and introducing them to new information Use this invaluable book to test your subject matter expertise Multiple choice exams are

This text book is primarily intended for students who are preparing for the entrance tests of IIT, JEE, NEET, AIIMS, SAT, and other esteemed colleges in same fields. This text is equally useful to the students preparing for their school exams.

Main Features of the Book

1. In this textual material, even a trivial concept is substantialized in this way to make it lucid and easy to grasp. Every concept is given in student-friendly language followed by a ladder of illustrations and checkpoint questions. Answer keys and solutions are provided at the end of each chapter, enabling students to confirm their knowledge without jumping too quickly to the provided answers.
2. Special attention is given to tricky topics like Coulomb's law in a medium partially filled with a dielectric liquid, Vector form of Coulomb's Law, Distribution of charges on metal surfaces, Electric field from electric potential, Electric potential from electric field, Image method, uniform and non-uniform electric currents, radial flow of current, calculation of resistance and resistivity, application of Kirchhoff's rules in complex circuit problems, identifying symmetries in

circuits ladder problems star delta transformation ammeter voltmeter and potentiometer etc so that student can easily solve them with fun 3 At the end of the theory part there are miscellaneous solved examples which involve the application of multiple concepts of this chapter 4 To test the understanding level of students multiple choice questions conceptual questions practice problems with previous years JEE Main and Advanced problems are provided at the end of the whole discussion Number of dots indicates level of problem difficulty Straightforward problems basic level are indicated by single dot intermediate problems JEE mains NEET level are indicated by double dots whereas challenging problems advanced level are indicated by three dots Answer keys with hints and solutions are provided at the end of each chapter **Electric**
