**Quagga and Zebra Mussels** Thomas F. Nalepa,Don W. Schloesser,2013-10-25 The introduction and rapid spread of two Eurasian mussel species *Dreissena polymorpha* zebra mussel and *Dreissena rostriformis bugensis* quagga mussel in waters of North America has caused great concern among industrial and recreational water users These invasive species can create substantial problems for raw water users such as water treatment facilities and power plants and they can have other negative impacts by altering aquatic environments In the 20 years since the first edition of this book was published zebra mussels have continued to spread and quagga mussels have become the greater threat in the Great Lakes in deep regions of large lakes and in the southwestern United States Quagga mussels have also expanded greatly in eastern and western Europe since the first book edition was published Quagga and Zebra Mussels Biology Impacts and Control Second Edition provides a broad view of the zebra quagga mussel issue offering a historic perspective and up to date information on mussel research Comprising 48 chapters this second edition includes reviews of mussel morphology physiology and behavior It details mussel distribution and spread in Europe and across North America and examines policy and regulatory responses management strategies and mitigation efforts In addition this book provides extensive coverage of the impact of invasive mussel species on freshwater ecosystems including effects on water clarity phytoplankton water quality food web changes and consequences to other aquatic fauna It also reviews and offers new insights on how zebra and quagga mussels respond and adapt to varying environmental conditions This new edition includes seven video clips that complement chapter text and through visual documentation provide a greater understanding of mussel behavior and distribution

**WATERMATEX 2000** P. Lessard,Peter A. Vanrolleghem,2001-05-31 Selected Proceedings of the 5th International Symposium on Systems Analysis and Computing in Water Quality Management Held in Gent Belgium 18 20 September 2000 The focus of the IWA

Specialist Group on Systems Analysis and Computing is essentially methodological. Its goal is to foster discussion of the interdisciplinary issues cutting across the many topics of interest within IWA. Consequently the themes of the symposium did not reflect specific concerns with sewers or wastewater treatment or river basin management or surface water quality or groundwater contamination. Rather the symposium was organised along the lines of new models, decision support systems, uncertainty and risk analysis, integrated urban wastewater systems, operations and control, sensors and monitoring, optimal experimental design, methodologies, model selection and calibration techniques, and time series analysis. Evidently the papers may each have case specific aspects but they also highlight matters of methodology that are common to all with a distinctly interdisciplinary character. There was an open call for papers resulting in abstracts from 30 countries around the world. Papers for oral and poster presentation at the symposium were selected by the Programme Committee from full papers. They were reviewed again and 47 of them were finally included in these proceedings. Notably 8 of the contributions were selected among the posters through a competition announced prior to the Symposium. The collection of papers in these proceedings are a comprehensive update that will prove invaluable for those working in the fields of environmental engineering, river basin management, aquatic ecology, process optimisation, data mining, planning and monitoring.
