Autodesk Inventor 2022 A Tutorial Introduction L. Scott Hansen, 2021-04 This unique text and video set presents a thorough introduction to Autodesk Inventor for anyone with little or no prior experience with CAD software. It can be used in virtually any setting from four year engineering schools to on the job use or self study. Unlike other books of its kind it begins at a very basic level and ends at a very advanced level. It's perfect for anyone interested in learning Autodesk Inventor quickly and effectively using a learning by doing approach. Additionally the extensive videos that are included with this book make it easier than ever to learn Inventor by clearly demonstrating how to use its tools. The philosophy behind this book is that learning computer aided design programs is best accomplished by emphasizing the application of the tools. Students also seem to learn more quickly and retain information and skills better if they are actually creating something with the software program. The driving force behind this book is learning by doing. The instructional format of this book centers on making sure that students learn by doing and that students can learn from this book on their own. In fact this is one thing that differentiates this book from others the emphasis on being able to use the book for self study. The presentation of Autodesk Inventor is structured so that no previous knowledge of any CAD program is required. This book uses the philosophy that Inventor is mastered best by concentrating on applying the program to create different types of solid models starting simply and then using the power of the program to progressively create more complex solid models. The Drawing Activities at the end of each chapter are more complex iterations of the part developed by each chapter's objectives. Since CAD programs are highly visual there are graphical illustrations showing how to use the program. This reinforces the learn by doing philosophy since a student can see exactly what the program shows and then step through progressive commands to implement the required operations. Rather than using a verbal description of the command a screen capture of each command is replicated. Included Videos Each book includes access to extensive video training created by author Scott Hansen. The videos follow along with the table of contents of the book. Each chapter has one or more videos in which the author demonstrates how to use the tools that are covered in that chapter. Most videos follow an exercise from start to finish. The exercises created in the video are very similar to the exercise found in the corresponding chapter. Throughout the videos Scott Hansen describes how to perform each step the reason behind these steps and some of the other options available with the various tools. The author's clear and simple description of each exercise is a perfect companion to the text and makes learning Autodesk Inventor easier than ever. There are twenty seven videos with three hours and forty five minutes of training in total. **Autodesk VIZ 4 for Beginners** Elise Moss, 2002-11 MEM30031A Introduction to AutoCAD Warren Blackadder, 2015-11-08 The unit of competency covers the skills and knowledge required to apply functions of computer aided design CAD software programs that are typically used in the production of detail drawings and covers competent use of a CAD program to perform basic
