How-to Manual for Pacemaker and ICD Devices Amin Al-Ahmad, Andrea Natale, Paul J. Wang, James P. Daubert, Luigi Padeletti, 2017-12-27. A complete how-to-do-it guide to planning, programming, implementing and troubleshooting today's pacemakers and other implantable cardiac devices. Edited by a team of leading clinician educators, this is a practical go-to reference for trainees and clinical staff who are new to or less experienced with the programming and management of implantable devices. It distills device best practices into a single quick reference volume that focuses on essential tasks, common pitfalls and likely complications. Each chapter follows a hands-on how-to-do-it approach that helps readers quickly master even the most challenging device-related tasks such as programming and how to respond confidently when complications arise. Today's pacemakers and other implantable EP devices are to earlier versions what smart phones are to rotary phones. They are not only smaller and more comfortable, they offer complex programming options that allow clinicians to adapt a device to individual patient requirements. As they continue to become smaller, smarter and more adaptable, these devices also become more challenging for clinicians to set up, manage and monitor. This unique quick reference guide dramatically reduces the learning curve for mastering this essential technology by giving doctors and technicians the how-to information they need. Focuses on tasks clinicians perform including pre-implementation, planning, programming, management, troubleshooting and more. Shows how expert clinicians achieve optimal outcomes in their own labs with real-world examples. Features more than 300 images including ECGs, X-ray and fluoroscopy images from device interrogation, intracardiac electrograms and color electroanatomical maps. Provides eight videos on an accompanying website demonstrating key tasks and techniques. Also available in an eBook version enhanced with instructional videos. *How-to Manual for Pacemaker and ICD Devices* is an indispensable tool of the trade for electrophysiologists, fellows in electrophysiology, EP nurses, technical staff and industry professionals.

Construction 4.0 Anil Sawhney, Michael Riley, Javier Irizarry, 2020-02-06. Modelled on the concept of Industry 4.0, the idea of Construction 4.0 is based on a confluence of trends and technologies that promise to reshape the way built environment assets are designed, constructed and operated. With the pervasive use of Building Information Modelling (BIM), lean principles, digital technologies and offsite construction, the industry is at the cusp of this transformation. The critical challenge is the fragmented state of teaching, research and professional practice in the built environment sector. This handbook aims to overcome this fragmentation by describing Construction 4.0

in the context of its current state emerging trends and technologies and the people and process issues that surround the coming transformation Construction 4.0 is a framework that is a confluence and convergence of the following broad themes discussed in this book Industrial production prefabrication 3D printing and assembly offsite manufacture Cyber physical systems actuators sensors IoT robots cobots drones Digital and computing technologies BIM video and laser scanning AI and cloud computing big data and data analytics reality capture Blockchain simulation augmented reality data standards and interoperability and vertical and horizontal integration The aim of this handbook is to describe the Construction 4.0 framework and consequently highlight the resultant processes and practices that allow us to plan design deliver and operate built environment assets more effectively and efficiently by focusing on the physical to digital transformation and then digital to physical transformation This book is essential reading for all built environment and AEC stakeholders who need to get to grips with the technological transformations currently shaping their industry research and teaching
