Teaching and Learning in a Digital World Michael E. Auer, David Guralnick, Istvan Simonics, 2018-02-09 This book gathers the Proceedings of the 20th International Conference on Interactive Collaborative Learning ICL2017 held in Budapest Hungary on 27-29 September 2017. The authors are currently witnessing a significant transformation in the development of education. The impact of globalisation on all areas of human life, the exponential acceleration of technological developments and global markets and the need for flexibility and agility are essential and challenging elements of this process that have to be tackled in general but especially in engineering education. To face these current real world challenges higher education has to find innovative ways to quickly respond to them. Since its inception in 1998 this conference has been devoted to new approaches in learning with a focus on collaborative learning. Today the ICL conferences offer a forum for exchange concerning relevant trends and research results and for sharing practical experience gained while developing and testing elements of new technologies and pedagogies in the learning context. *CAD/CAM, Robotics and Factories of the Future* Dipak Kumar Mandal, Chanan Singh Syan, 2016-01-05 This volume is based on the proceedings of the 28th International Conference on CAD/CAM Robotics and Factories of the Future. This book specially focuses on the positive changes made in the field of robotics CAD/CAM and future outlook for emerging manufacturing units. Some of the important topics discussed in the conference are product development and sustainability modeling and simulation automation robotics and handling systems supply chain management and logistics advanced manufacturing processes human aspects in engineering activities emerging scenarios in engineering education and training. The contents of this set of proceedings will prove useful to both researchers and practitioners. Learning Autodesk Inventor 2015 Ron Myers, Dale Schneider, Ed O'Halloran, Kristen Smith, 2014-01-01 Welcome to Learning Inventor 2015 a training manual for use in a classroom setting as well as a user manual for the student who prefers a self-paced learning environment. The primary objective of this manual is to provide the student with a fundamental knowledge of Autodesk Inventor. This manual is separated into 11 chapters covering key areas of drafting and design in Inventor. **Autodesk Inventor 2015 - A Tutorial Introduction** L. Scott Hansen, 2014-03 This unique text presents a thorough introduction to Autodesk Inventor for anyone with little or no prior experience with CAD software. It can be used in virtually any setting from four-year engineering schools to on-the-job use or self-study. Unlike other books of its kind it begins at a very basic level and ends at a very advanced level. It is perfect for anyone interested in learning Autodesk Inventor quickly and effectively using a learning-by-doing approach. The philosophy behind this book is that learning computer-aided design programs is best accomplished by emphasizing the application of the tools. Students also seem to learn more quickly and retain information and skills better if they are actually creating something with the software program. The driving force behind this book is learning by doing. The instructional format of this book centers on making sure that students learn by doing and that students can learn from this book on their own. In fact this is

one thing that differentiates this book from others the emphasis on being able to use the book for self study The presentation of Autodesk Inventor is structured so that no previous knowledge of any CAD program is required This book uses the philosophy that Inventor is mastered best by concentrating on applying the program to create different types of solid models starting simply and then using the power of the program to progressively create more complex solid models The Drawing Activities at the end of each chapter are more complex iterations of the part developed by each chapter s objectives CAD programs are highly visual there are graphical illustrations showing how to use the program This reinforces the learn by doing philosophy since a student can see exactly what the program shows and then step through progressive commands to implement the required operations Rather than using a verbal description of the command a screen capture of each command is replicated
