 of bio inspired models to approach formal and natural languages The main goal of the volume is to promote
 interdisciplinarity among linguistics biology and computation The area of convergence between these three disciplines is
 giving rise to the emergence of new scientific paradigms that will have an epistemological social and cultural impact The
 book is organized around three thematic areas Every area relates two of the three main topics language computation and
 biology This volume stands out from existing publications because of its interdisciplinary nature There has been a long
 tradition of interchanging methods among the aforementioned three disciplines but it is difficult to find a single volume
 where this interchange of methods is shown The volume includes chapters that clearly illustrate these interdisciplinary
 approaches and their benefits This book will be of value to specialists who work in linguistics biology or computation and
 have interest in using methods from other disciplines that can provide new ideas new tools and new formalisms to approach
 their problems and that can help in the improvement of their theories and models **Texas Instruments Technical**
