## **Ecological Imperialism The Biological Expansion Of Europe 9019:**

**Ecological Imperialism** Alfred W. Crosby, 2015-10-06 People of European descent form the bulk of the population in most of the temperate zones of the world North America Australia and New Zealand The military successes of European imperialism are easy to explain in many cases they were a matter of firearms against spears But as Alfred W Crosby maintains in this highly original and fascinating book the Europeans displacement and replacement of the native peoples in the temperate zones was more a matter of biology than of military conquest European organisms had certain decisive advantages over their New World and Australian counterparts The spread of European disease flora and fauna went hand in hand with the growth of populations Consequently these imperialists became proprietors of the most important agricultural lands in the world In the second edition Crosby revisits his now classic work and again evaluates the global historical importance of European ecological expansion Ecological Imperialism Alfred W. Crosby, 2004 New edition of this classic work that evaluates the ecological reasons for European expansion *Ecological Imperialism*, 1995 *Ecological Imperialism* Alfred W. Crosby, 1993-06-25 People of European descent form the bulk of the population in most of the temperate zones of the world North America Australia and New Zealand The military successes of European imperialism are easy to explain in many cases they were a matter of firearms against spears But as Alfred Crosby explains in his highly original and fascinating book the Europeans displacement and replacement of the native peoples in the temperate zones was more a matter of biology than of military conquest Germs, Seeds and Animals: Alfred W. Crosby, 2015-03-04 Alfred Crosby almost alone redirected the attention of historians to ecological issues that were important precisely because they were global In doing so he answered those who believed that world history had become impossible as a consequence of the post war proliferation of new historical specialties including not only ecological history but also new social histories areas studies histories of mentalities and popular cultures and studies of minorities majorities and ethnic groups In the introduction to this volume Professor Crosby recounts an intellectual path to ecological history that might stand as a rationale for world history in general He simply decided to study the most pervasive and important aspects of human experience By focusing on human universals like death and disease his studies highlight the epidemic rather than the epiphenomenal Sociological Abstracts Leo P. Chall, 1982 **Ecology and Empire** Tom Griffiths, Libby Robin, 1997 Ecology and Empire forged a historical partnership of great power and one which particularly in the last 500 years radically changed human and natural history across the globe This book scrutinizes European expansion from the perspectives of the so called colonized peripheries the settler societies It begins with Australia as a prism through which to consider the relations between settlers and their lands but moves well beyond this to a range of lands of empire It uses their distinctive ecologies and histories to shed new light on both the imperial and the settler environmental experience Ecology and Empire also explores the way in which the science of ecology itself was an artifact of empire drawing together the fields of imperial

history and the history of science      *Ecology and Power in the Age of Empire* Corey Ross, 2017 *Ecology and Power in the Age of Empire* provides the first wide ranging environmental history of the heyday of European imperialism from the late nineteenth century to the end of the colonial era It focuses on the ecological dimensions of the explosive growth of tropical commodity production global trade and modern resource management strategies that still visibly shape our world today and how they were related to broader social cultural and political developments in Europe's colonies Covering the overseas empires of all the major European powers Corey Ross argues that tropical environments were not merely a stage on which conquest and subjugation took place but were an essential part of the colonial project profoundly shaping the imperial enterprise even as they were shaped by it The story he tells is not only about the complexities of human experience but also about people's relationship with the ecosystems in which they were themselves embedded the soil water plants and animals that were likewise a part of Europe's empire Although it shows that imperial conquest rarely represented the signal ecological trauma that some accounts suggest it nonetheless demonstrates that modern imperialism marked a decisive and largely negative milestone for the natural environment By relating the expansion of modern empire global trade and mass consumption to the momentous ecological shifts that they entailed this book provides a historical perspective on the vital nexus of social political and environmental issues that we face in the twenty first century world      Green Imperialism Richard H. Grove, 1996-03-29 The first book to document the origins and early history of environmentalism especially its colonial and global aspects      **The Inversion of Ecological Imperialism** Stephen D. Doubledee, Central Missouri State University. Communication, 2005      **Green Imperialism** Richard H. Grove, 1995-01-27 The first book to document the origins and early history of environmentalism especially its colonial and global aspects      **Environment and Empire** William Beinart, Lotte Hughes, 2007-10-11 European imperialism was extraordinarily far reaching a key global historical process of the last 500 years It locked disparate human societies together over a wider area than any previous imperial expansion it underpinned the repopulation of the Americas and Australasia it was the precursor of globalization as we now understand it Imperialism was inseparable from the history of global environmental change Metropolitan countries sought raw materials of all kinds from timber and furs to rubber and oil They established sugar plantations that transformed island ecologies Settlers introduced new methods of farming and displaced indigenous peoples Colonial cities many of which became great conurbations fundamentally changed relationships between people and nature Consumer cultures the internal combustion engine and pollution are now ubiquitous Environmental history deals with the reciprocal interaction between people and other elements in the natural world and this book illustrates the diverse environmental themes in the history of empire Initially concentrating on the material factors that shaped empire and environmental change *Environment and Empire* discusses the way in which British consumers and manufacturers sucked in resources that were gathered hunted fished mined and farmed Yet it is also clear that British settler and colonial states sought to regulate the use of natural

resources as well as commodify them Conservation aimed to preserve resources by exclusion as in wildlife parks and forests and to guarantee efficient use of soil and water Exploring these linked themes of exploitation and conservation this study concludes with a focus on political reassertions by colonised peoples over natural resources In a post imperial age they have found a new voice reformulating ideas about nature landscape and heritage and challenging at a local and global level views of who has the right to regulate nature

### **Ecological Imperialism, Development, and the Capitalist World-System**

Mariko Lin Frame, 2022-10-13 Two major trends are currently challenging the sustainability of human civilization extreme inequality and the ecological crisis This book argues that these are intrinsically linked by further exploring the complex relationships between global ecological crises neoliberal globalization orthodox development policies and imperialism Drawn from extensive theoretical historical policy and empirical research as well as fieldwork in Africa and Asia this book examines the crucial characteristics of the capitalist world system and how it enables and drives ecological imperialism Neoliberal globalization has allowed for capital's unfettered access to and exploitation of Nature across the planet and neoliberal development policies have reinforced a contemporary form of ecological imperialism where the environments of the Global South are enclosed and exploited and local communities are dispossessed of their land and livelihoods Simultaneously resources from the Global South are funneled to the Global North in the form of consumer goods and ecologically unequal exchange while the profits from those resources are siphoned away to transnational corporations financiers and government elites This work traces the historical development of free market policies while also paying special attention to the role of Northern international financial institutions emerging economies the semi periphery and the often hidden role of international finance in ecological imperialism This volume will be of keen interest to scholars and students of political economy critical development studies environmental sociology and political ecology

### **Imperialism and colonialism**

H.L. Wesseling, 2000 *Germes, Seeds & Animals* Alfred W. Crosby, 2015 **Environments of Empire** Ulrike Kirchberger, Brett M. Bennett, 2020 This collection explores the networks that shaped ecological change within and between European and Middle Eastern empires during the nineteenth and early twentieth centuries and is divided into three parts The first focuses on the role of nation building in trans imperial ecological transfers the second focuses on approaches from the history of science looking at the global transfer circulation and diffusion of ideas about the environment and the third employs methods from animal studies challenging anthropocentric views of environmental history

### **Eco-Cultural Networks and the British Empire**

James Beattie, Edward Melillo, Emily O'Gorman, 2014-12-18 19th century British imperial expansion dramatically shaped today's globalised world Imperialism encouraged mass migrations of people shifting flora fauna and commodities around the world and led to a series of radical environmental changes never before experienced in history Eco Cultural Networks and the British Empire explores how these networks shaped ecosystems cultures and societies throughout the British Empire and how they were themselves transformed by local and regional conditions This multi authored volume

begins with a rigorous theoretical analysis of the categories of empire and imperialism. Its chapters, written by leading scholars in the field, draw methodologically from recent studies in environmental history, postcolonial theory, and the history of science. Together, these perspectives provide a comprehensive historical understanding of how the British Empire reshaped the globe during the 19th and 20th centuries. This book will be an important addition to the literature on British imperialism and global ecological change.

**The "new Imperialism"** Harrison M. Wright, 1976 *Ecology, Climate and Empire*

Richard H. Grove, 1997 This collection of essays from a pioneering scholar in the field of environmental history vividly demonstrates that concerns about climate change are far from being a uniquely modern phenomenon. Grove traces the origins of present-day environmental debates about soil erosion, deforestation, and climate change in the writings of early colonial administrators, doctors, and missionaries. He traces what is known and what can be inferred concerning historic El Niño events centuries before the devastating 1997-98 instance. In an important and wide-ranging concluding essay, he analyses the general significance of marginal land and its ecology in the history of popular resistance movements.

Amazon.com *Imperialism and the Natural World* John MacDonal MacKenzie, John M. MacKenzie, 1990 Imperial power, both formal and informal, and research in the natural sciences were closely dependent in the nineteenth century. This book examines a portion of the mass-produced juvenile literature focusing on the cluster of ideas connected with Britain's role in the maintenance of order and the spread of civilization. It discusses the political economy of Western ecological systems and the consequences of their extension to the colonial periphery, particularly in forms of forest conservation. Progress and consumerism were major constituents of the consensus that helped stabilise the late Victorian society, but consumerism only works if it can deliver the goods. From 1842 onwards, almost all major episodes of coordinated popular resistance to colonial rule in India were preceded by phases of vigorous resistance to colonial forest control. By the late 1840s, a limited number of professional positions were available for geologists in British imperial service, but imperial geology had a longer pedigree. Modern imperialism or municipal imperialism offers a broader framework for understanding the origins, long duration, and persistent support for overseas expansion, which transcended the rise and fall of cabinets or international realignments in the 1800s. Although medical scientists began to discern and control the microbiological causes of tropical illnesses after the mid-nineteenth century, the claims for climatic causation did not undergo a corresponding decline. Arthur Pearson's *Pearson's Magazine* was patriotic, militaristic, and devoted to royalty. The book explores how science emerged as an important feature of the development policies of the Colonial Office (CO) of the colonial empire.
