Ecological Census Techniques A Handbook:

Ecological Census Techniques William J. Sutherland, 2006-08-03 This is an updated version of the best selling first edition *Ecological Census Techniques* with updating some new chapters and authors Almost all ecological and conservation work involves carrying out a census or survey This practically focussed book describes how to plan a census the practical details and shows with worked examples how to analyse the results The first three chapters describe planning sampling and the basic theory necessary for carrying out a census In the subsequent chapters international experts describe the appropriate methods for counting plants insects fish amphibians reptiles mammals and birds As many censuses also relate the results to environmental variability there is a chapter explaining the main methods Finally there is a list of the most common mistakes encountered when carrying out a census

Ecological Census Techniques William J. Sutherland, 1998-03 Virtually any exercise in ecology will require some knowledge of the techniques for carrying out a census of population numbers This practical text outlines clearly with worked examples the main techniques used by field ecologists to enumerate plants and animals

The Conservation Handbook William J. Sutherland, 2008-04-15 Textbooks on the principles of conservation biology abound Yet how does one put this theoretical knowledge into practice The aim of *The Conservation Handbook* is to provide clear guidance on the implementation of conservation techniques The wide range of methods described include those for ecological research monitoring planning education habitat management and combining conservation with development Nineteen case studies illustrate how the methods have been applied The book will be of interest to conservation biology students and practicing conservationists worldwide For each copy of the book sold another copy will be sent free to a practicing conservationist outside Western Europe North America Australia New Zealand and Japan Foreword by E O Wilson Concise practical guide packed full of ideas methods and advice Provides solutions for the main conservation problems most commonly encountered 18 global case studies illustrate the application of techniques The Conservation Handbook Donations Project this book is being sent free to those practising conservationists outside Western Europe North America Australia New Zealand and Japan who are otherwise unlikely to obtain a copy These copies are provided at cost price by Blackwell Science the publisher and paid for with the author's royalties Each book sold means another one will be donated
