

## Ecology Vocabulary: Interactions Within the Environment

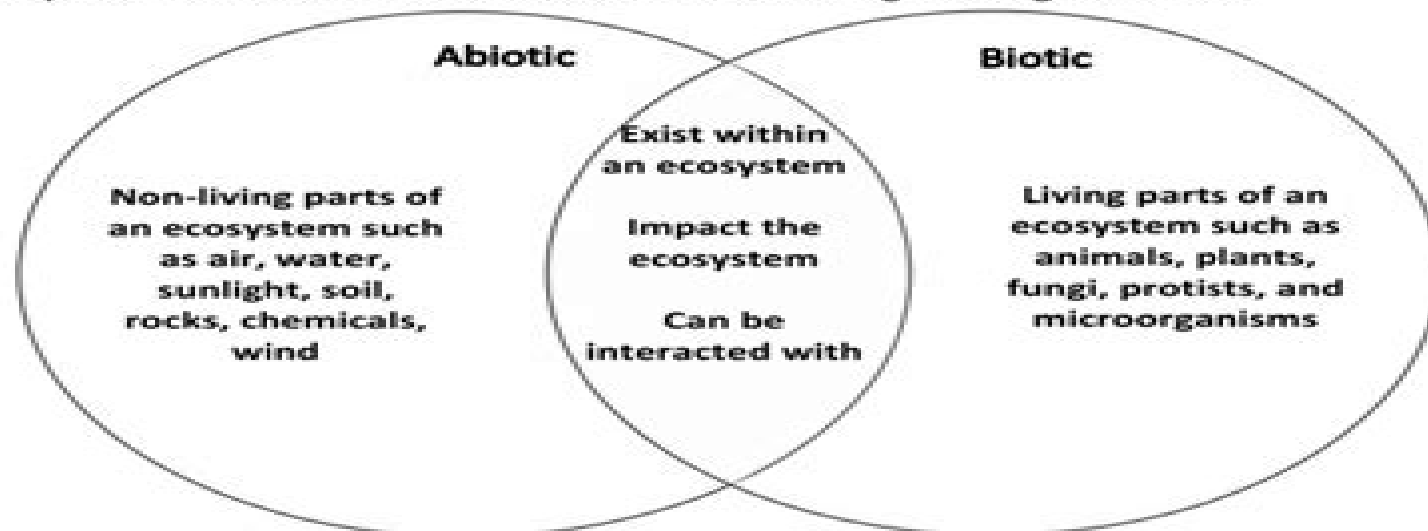

TEACHER KEY

*Answer the questions below using the reading*

1. Based on the definition of Ecology, what do you think the word parts “eco” and “ology” mean?

**Eco means “environment” and ology means “the study of”**

2. Compare and contrast abiotic and biotic factors using the diagram below.

3. Provide three examples of each:
  - a. Abiotic Factor: **soil, water, air, rocks, chemicals, sunlight, wind**
  - b. Biotic Factor: **fungi, plants, animals, bacteria, protists**
4. Write a paragraph explaining how energy flows through an ecosystem using the following terms: energy pyramid, trophic level, producer, consumer, decomposer  
**An energy pyramid shows how energy moves through an ecosystem. The sun is the source of all energy on Earth. The sun provides energy needed for the bottom of the energy pyramid: produces. Producers or autotrophs are plants that which harness much of the sun’s energy to make their own food. As we move up the energy pyramid, much of the sun’s energy is lost and only 10% of energy is transferred to each trophic level. The primary consumer is an herbivore or omnivore that eats the producers. Next is the secondary consumer, a carnivore or omnivore that eat the primary consumers. Tertiary or top consumers eat the secondary consumers.**

questions as they relate to plants insects and their relationships In chapter one I use a Bayesian hierarchical modeling approach to examine how fruiting and seed dispersal phenology is influenced by climate across the subalpine wildflower community on Mt Rainier I find that the kinds of changes we expect to occur in snowmelt timing temperature and soil moisture are likely to shorten the time it takes for plants to transition from flowering to seed dispersal This work highlights the importance of increased attention on post flowering phases of plant reproductive phenology and suggests that the future may shift relationships between plants and their animal associates including frugivores and invertebrate seed predators In chapter two I ask how the interaction between an ecologically important species subalpine lupine *Lupinus latifolius* var *subalpinus* and its primary insect herbivore the Cascade grasshopper *Prumnacris rainierensis* changes with elevation and use a combination of observations experiments and trait measurements to tease apart the drivers of these patterns The results of this chapter show that grasshopper herbivory has meaningful impacts on lupines and that the strength of this relationship increases with elevation due to a complex suite of interactions between abiotic factors and plant and insect traits that influence levels of consumption These findings point to the difficulty of predicting how species interactions will change in systems where warming is not the sole variable of interest and where climatic history shapes populations responses to environmental change Finally in chapter three I take a meta analytic approach to test the hypothesis that ecological restoration is an effective means of invertebrate conservation using a dataset comprising 59 studies of restoration impacts on invertebrate biodiversity with a wide geographic and taxonomic scope On average I find that the restoration of native vegetation is associated with significant increases in species richness abundance and diversity However high among study heterogeneity suggests an urgent need for more research on neglected taxa habitats and geographic regions more careful study design and reporting and a move toward sharing raw data from restorations assessments Overall this work makes novel contributions to our knowledge about biotic responses to climate change from the perspective of plants and insects and underscores the fundamental complexity of ecological dynamics

*engineering calculations in radiative heat transfer* - May 01 2022

web engineering calculations in radiative heat transfer is a six chapter book that first explains the basic principles of thermal radiation and direct radiative transfer total exchange of radiation within an enclosure containing an absorbing or non absorbing medium is then described

[radiative heat transfer an overview sciencedirect topics](#) - Mar 11 2023

web radiative heat transfer is an important route for the heat transfer in the fast bed especially in a situation with a high temperature 700 c and low bulk density 30 kg m<sup>3</sup> this section adopts the simplified engineering calculation conditions discussed in chapter theoretical foundation and basic properties of thermal radiation

[radiant heat transfer engineering library](#) - Jan 29 2022

web radiant heat transfer radiant heat transfer is thermal energy transferred by means of electromagnetic waves or particles thermal radiation radiant heat transfer involves the transfer of heat by electromagnetic radiation that arises due to the temperature of a body

[radiative heat transfer calculations in three dimensional](#) - Nov 07 2022

web feb 1 1996 radiative heat transfer calculations in three dimensional complex geometries w m g malalasekera e h james

[view factor for radiative heat transfer calculations between](#) - Jun 02 2022

web mar 3 2023 introduction in many engineering applications it is required to determine the radiative heat transfer between surfaces the view factor allows to compute the fraction of the rate of radiant energy leaving a surface that reaches another surface

*engineering calculations in radiative heat transfer google books* - Jun 14 2023

web oct 22 2013 engineering calculations in radiative heat transfer is a six chapter book that first explains the basic principles of thermal radiation and direct radiative transfer total exchange of

**engineering calculations in radiative heat transfer 1st edition** - May 13 2023

web engineering calculations in radiative heat transfer is a six chapter book that first explains the basic principles of thermal radiation and direct radiative transfer total exchange of radiation within an enclosure containing an absorbing or non absorbing medium is then described

[thermal radiation wikipedia](#) - Mar 31 2022

web calculation of radiative heat transfer between groups of object including a cavity or surroundings requires solution of a set of simultaneous equations using the radiosity method in these calculations the geometrical configuration of the problem is distilled to a set of numbers called view factors which give the proportion of radiation

**wsgg models for radiative heat transfer calculations in hydrogen** - Jan 09 2023

web sep 3 2021 wsgg model development in a wsgg model a number of gray gases with constant pressure absorption coefficients are used to represent the real gases for radiative heat transfer calculations the weighting factors of each gray gas are defined to cover a fraction of the blackbody emission spectrum

[chapter 12 radiation heat transfer university of waterloo](#) - Sep 05 2022

web einstein postulated another theory for electromagnetic radiation based on this theory electromagnetic radiation is the propagation of a collection of discrete packets of energy called photons in this view each photon of frequency  $\nu$  is considered to have energy of  $e h \nu$   $h c \lambda$  where  $h$   $6.625 \times 10^{-34}$  j s is the planck s constant

*specialty grand challenge for heat transfer and thermal power* - Feb 27 2022

web apr 26 2022 radiative heat transfer in advanced thermal insulations it is known that materials with high porosity and small pore size are preferred for thermal insulation at both high and moderate temperatures high porosity reduces the contribution of heat conduction in the carrier material while the small pore size less than the mean free path of gas

**radiation heat transfer an overview sciencedirect topics** - Jul 03 2022

web radiation heat transfer the radiation heat transfer between two parallel planes is reduced by placing a parallel aluminum sheet in the middle of the gap the surface temperatures are  $\theta_1 = 40^\circ\text{C}$  and  $\theta_2 = 5^\circ\text{C}$  respectively the emissivities are  $\epsilon_1 = 0.85$  the emissivity of both sides of the aluminum is  $\epsilon_a = 0.05$  calculate by
