**Campaigns in the Americas** Nina Schneider, 2025-11-03 This book delves into the past and examines the origins of activism against child labour. It addresses a hitherto under-examined question: how and why did child labour develop into a key concern between the 1880s and 1930s? Who were the protagonists who first raised the issue of child labour as a global concern? The study aims to provide the first account of the history of diverse and locally grounded but nationally and frequently globally connected child labour opponents in the Americas: their motivations and campaigns at the turn of the 20th century. I argue that for the period between 1888 and 1938 one can identify similar protagonists, a joint goal, a broadly similar timing, common platforms, comparable campaigning mechanisms, and many types of connections or entanglements across regions. Nevertheless, in contrast to the global anti-slavery movement, child labour opponents formed a loosely institutionalised network which lacked an international organisation that focused specifically on child labour. A global history approach to child labour opponents helps reveal large-scale patterns across societies and highlight similarities and differences between cases.  
**Statistics for Geography and Environmental Science** Richard Harris, Claire Jarvis, 2014-05-01 Statistics are important tools for validating theory, making predictions, and engaging in policy research. They help to provide informed commentary about social and environmental issues and to make the case for change. Knowledge of statistics is therefore a necessary skill for any student of geography or environmental science. This textbook is aimed at students on a degree course taking a module in statistics for the first time. It focuses on analysing, exploring, and making sense of data in areas of core interest to physical and human geographers and to environmental scientists. It covers the subject in a broadly conventional way, from descriptive statistics through inferential statistics to relational statistics, but does so with an emphasis on applied data analysis throughout.
