*Finance and Development, June 2014* International Monetary Fund. External Relations Dept., 2014-05-27 This chapter highlights various ways Asia's growth has affected the world economy The chapter also shows that if currency trends continue the Asian economy is expected to be larger than that of the United States and Europe combined Some Asian countries offer sophisticated financial markets and are centers for technological innovation while others are largely agricultural The study shows that the region is home to 700 million poor people about 65 percent of the world's poor a figure that stands in stark relief against Asia's economic strength and growing prosperity The chapter also references the inquiry by the managing editor of the Journal of Economic Perspectives into the rich and sometimes tortured relationship between economics and virtue

**Global Economic Prospects, June 2015** The World Bank, 2015-06-22 Global growth is expected

to be 2.8 percent in 2015 but is expected to pick up to 3.2 percent in 2016. Growth in developing countries and some high income countries is set to disappoint again this year. The prospect of rising borrowing costs will compound the challenges many developing countries are facing as they adapt to an era of low commodity prices. Risks to this outlook remain tilted to the downside. This edition of Global Economic Prospects includes two Special Features that analyze the policy challenges raised by the two transitions in developing countries: the risks associated with the first U.S. central bank interest rate increase since 2006 and the implications of persistently low commodity prices for low income countries. Global Economic Prospects is a World Bank Group Flagship Report that examines global economic developments and prospects with a special focus on developing countries on a semiannual basis in January and June. The January edition includes in depth analyses of topical policy challenges faced by developing countries while the June edition contains shorter analytical pieces.

*Climate Change and Natural Disasters* Vinod Thomas, 2017-01-31. The start of the new millennium will be remembered for deadly climate related disasters: the great floods in Thailand in 2011, Super Storm Sandy in the United States in 2012 and Typhoon Haiyan in the Philippines in 2013 to name a few. In 2014, 17.5 million people were displaced by climate related disasters, ten times more than the 1.7 million displaced by geophysical hazards. What is causing the increase in natural disasters and what effect does it have on the economy? *Climate Change and Natural Disasters* sends three messages: human made factors exert a growing influence on climate related disasters because of the link to anthropogenic factors; there is a pressing need for climate mitigation and prevention; including climate adaptation ought not to be viewed as a cost to economic growth but as an investment. Ultimately, attention to climate related disasters, arguably the most tangible manifestation of global warming, may help mobilize broader climate action. It can also be instrumental in transitioning to a path of low carbon green growth, improving disaster resilience, improving natural resource use and caring for the urban environment. Vinod Thomas proposes that economic growth will become sustainable only if governments, political actors and local communities combine natural disaster prevention and controlling climate change into national growth strategies. When considering all types of capital, particularly human capital, climate action can drive economic growth rather than hinder it.

*Accounting for Biological Assets* Rute Gonçalves, Patrícia Lopes, 2017-10-16. This book explores accounting for biological assets under IAS 41 Agriculture and explains the recent adjustments introduced by the IASB which allow firms to choose between cost or revaluation models concerning mature bearer plants. Identifying the firm and country level drivers that inform the disclosure and measurement practices of biological assets, this concise guide examines the value relevance of measuring those assets at fair value. It also analyses how firm and country level drivers explain the differences in the disclosure level and practices used to measure biological assets under IAS 41. Finally, it evaluates whether there is a difference in the relevance of biological assets among the listed firms with high and low disclosure levels on biological assets. Based on a major international study of a wide selection of firms and country level drivers, this book is vital for standard setters, stakeholders, students, accountants.

and auditors who need to understand disclosure and measurement practices of biological assets under IAS 41     The
