the original biographical notes *Engineering Education* John Heywood,2006-01-24 A synthesis of nearly 2 000 articles to
help make engineers better educators While a significant body of knowledge has evolved in the field of engineering education
over the years much of the published information has been restricted to scholarly journals and has not found a broad
audience This publication rectifies that situation by reviewing the findings of nearly 2 000 scholarly articles to help engineers
become better educators devise more effective curricula and be more effective leaders and advocates in curriculum and
research development The author s first objective is to provide an illustrative review of research and development in
engineering education since 1960 His second objective is with the examples given to encourage the practice of classroom
assessment and research and his third objective is to promote the idea of curriculum leadership The publication is divided
into four main parts Part I demonstrates how the underpinnings of education history philosophy psychology sociology
determine the aims and objectives of the curriculum and the curriculum s internal structure which integrates assessment
content teaching and learning Part II focuses on the curriculum itself considering such key issues as content organization
trends and change A chapter on interdisciplinary and integrated study and a chapter on project and problem based models of
curriculum are included Part III examines problem solving creativity and design Part IV delves into teaching assessment and
evaluation beginning with a chapter on the lecture cooperative learning and teamwork The book ends with a brief insightful
forecast of the future of engineering education Because this is a practical tool and reference for engineers each chapter is
self contained and may be read independently of the others Unlike other works in engineering education which are generally
intended for educational researchers this publication is written not only for researchers in the field of engineering education
but also for all engineers who teach All readers acquire a host of practical skills and knowledge in the fields of learning
