Guide to the Parasites of Fishes of Canada L. Margolis, Z. Kabata, 1984 *Synopsis of the Parasites of Fishes of Canada* T. E. McDonald, L. Margolis, National Research Council Canada, Pacific Biological Station, 1995 Information on the parasites of Canadian fishes published between the years 1978 and 1993 inclusive is assembled as Parasite Host and Host Parasite lists The 925 named species of parasites are reported on 292 species of Canadian fishes The Parasite Host list is organized on a taxonomic basis and identifies for each species its habitat freshwater marine or brackish site of occurrence in its host's species host's known geographic distribution within Canadian waters and the published source for each host and locality record The Host Parasite list is organized according to the taxonomy of the hosts and is accompanied by data on the known Canadian distribution of the parasites For both the Parasite Host and Host Parasite lists a Remarks section containing explanatory comments concerning systematics nomenclature and notes on other specific items is included as warranted In addition to listing the cited references as supplementary list of references is included to cover other Canadian literature on fish parasites Fish atlas of the Celtic Sea, North Sea, and Baltic Sea Henk J.L. Heessen, Niels Daan, Jim R. Ellis, 2023-09-14 The atlas presents a unique set of abundance data to describe the spatial depth size and temporal distribution of demersal and pelagic fish species over an extensive marine area together with accounts of their biology A large number of pictures graphs

and distribution maps illustrate the text By largely avoiding or at least explaining scientific terms and providing extensive references the book should be useful for both laymen and scientists The quantitative information on some 200 fish taxa is derived from 72 000 stations fished by research vessels during the period 1977 2013 The area covers the northwest European shelf from west of Ireland to the central Baltic Sea and from Brittany to the Shetlands Although the surveys extend beyond the shelf edge only taxa reported at least once in waters less than 200 m are included Typical deep water species and typical fresh water species are excluded We hope this publication will contribute to gaining a better understanding of the ocean ecosystems
