SERIAL NO.	MODEL NO.
120823 B	B-260 JAOE

The list is further corrected by the last TWO letters in the model designation number, i.e., B-200 in the example, and is sometimes followed by additional letters or numbers. All present models and future production will have numbers only following the basic model number. The lettering system has been discontinued. Due to varied employment of engine sizes, there may be a large number of models. A complete list of these models, referred to as MODEL VARIATIONS, will be found following each Basic Parts List. Under the new system of assigning model variation numbers, the first variation over the standard engine will begin with "100". A typical model number might be 1000-107 for the engine model variation. But the first such Basic Parts List will tell what parts or assemblies are common to each variation. The second variation will be 200, and the third will be 300. Following the Basic Parts List for the B-700 engine, the B-700-100 has a greater number of parts and is used differently and that the great reducer is omitted in the 1200 position. If an engine is used in a 1200 position for the great reducer, then one must turn to Section III (Accessories) and look up the part number for the accessory assembly number in the case 2000.

You must also determine the basic TYPE of your engine. The TYPE is a Chrysler engine & always shows as a Six-Cyl. FIVE-Valve Cylinder and Head Assembly. 120000 is its part number.

There will be a separate Division in Section II for each type change of an engine which is a special variation of the horsepower of the three-horse type.
