Honey Bees, Beekeeping and Bee Products Aijaz Ahmad Wachkoo, Gulzar Ahmad Nayik, Jalal Uddin, Mohammad Javed Ansari, 2024-03-14 Honey bees are social insects; they live together in large, well-organized family groups comprising three castes: queen, fertile female workers, sterile females, and drones. Males. During honey flow season, there is a considerable increase in the foraging activity of the workers and in the rate of egg laying by the queen. Sex determination in honey bees involves a multi-allelic locus such that homozygotes develop as males and heterozygotes as females, whereas diet quality influences the caste determination in honey bees. Like all living organisms, honey bees can be infested with diseases and pests. Some of these are more deleterious to bee colonies than others, but it is important for the beekeeper to be able to recognize conditions that might be disease or pest-related and respond accordingly so as to improve the quality of honey and honey bee products. The best-known primary products of beekeeping are honey and wax, but pollen, propolis, royal jelly, venom, queens, bees, and their larvae are also marketable primary bee products. The purpose of this book is to make available information on bee biology and beekeeping as well as to provide comprehensive information on manufacturing, processing, and marketing of value-added bee products. This book has been designed as a useful tool for the many diverse professionals who characterize and market honey bee products, including beekeepers, non-beekeepers, small entrepreneurs, extension officers, and those involved in small business development. This edited book will be the first of its kind to contain comprehensive information on both bees and bee products.

Key Features:
Contains comprehensive information on beekeeping.
Discusses the recent advances in beekeeping.
Sheds light on bee colony integration and organization.
Contains brief information on honey bee products.
