Cluster Analysis for Corpus Linguistics Hermann Moisl, 2015-02-24 The standard scientific methodology in linguistics is empirical testing of falsifiable hypotheses As such the process of hypothesis generation is central and involves formulation of a research question about a domain of interest and statement of a hypothesis relative to it In corpus linguistics the domain is text and generation involves abstraction of data from text data analysis and formulation of a hypothesis based on inference from the results Traditionally this process has been paper based but the advent of electronic text has increasingly rendered it obsolete both because the size of digital corpora is now at or beyond the limit of what can efficiently be used in the traditional way and because the complexity of data abstracted from them can be impenetrable to understanding Linguists are increasingly turning to mathematical and statistical computational methods for help and cluster analysis is such a method It is used across the sciences for hypothesis generation by identification of structure in data which are too large or complex or both to be interpretable by direct inspection This book aims to show how cluster analysis can be used for hypothesis generation in corpus linguistics thereby contributing to a quantitative empirical methodology for the discipline

Cluster Analysis in Neuropsychological Research Daniel N. Allen, Gerald Goldstein, 2014-07-08 Cluster analysis is a multivariate classification technique that allows for identification of homogenous subgroups within diverse samples based on shared characteristics In recent years cluster analysis has been increasingly applied to psychological and neuropsychological variables to address a number of empirical questions This book provides an overview of cluster analysis including statistical and methodological considerations in its application to neurobehavioral variables First an introduction to cluster analysis is presented that emphasizes issues of relevance to neuropsychological research including controversies surrounding its use Cluster analysis is then applied to clinical disorders that do not have an associated prototypical neuropsychological profile including traumatic brain injury schizophrenia and health problems associated with homelessness In a second application cluster analysis is used to investigate the course of normal memory development Finally cluster analysis is applied to
