1. A male and female bird have 4 unhatched eggs. The female is on the left heterozygous; the male on the right is homozygous recessive. Use B or b for your genotypes.

- a. Write the genotype of the female (left) below:

Bb

- b. Write the genotype of the male (right) below:

bb

- c. Which color is dominant, gray or black? How do you know?

gray. Any time you have at least one dominant allele the observed trait is the dominant allele

- d. Write the phenotype of the female and the phenotype of the male below:

Female - gray

Male - black

- e. Complete the Punnett Square below for this couple:

	b	b
B	Bb	Bb
b	bb	bb

- f. If they follow the Punnett Square ratios, what will the babies in the eggs look like when they hatch?

2 - gray

2 - black

- g. Will all four offspring adhere exactly to the ratios predicted by the Punnett Square? Explain:

Not necessarily, it is possible that they will adhere but a Punnett square is only a prediction.

Hint: if I flip a coin and get heads 5 times in a row, what is the likelihood that I will get heads on the next flip?

Principles of Plant Genetics and Breeding

George Acquaah, 2012-08-16 To respond to the increasing need to feed the world's population as well as an ever greater demand for a balanced and healthy diet there is a continuing need to produce improved new cultivars or varieties of plants particularly crop plants. The strategies used to produce these are increasingly based on our knowledge of relevant science particularly genetics but involves a multidisciplinary understanding that optimizes the approaches taken. *Principles of Plant Genetics and Breeding* 2nd Edition introduces both classical and molecular tools for plant breeding. Topics such as biotechnology in plant breeding, intellectual property risks, emerging concepts, decentralized breeding, organic breeding and more are addressed in the new updated edition of this text. Industry highlight boxes are included throughout the text to contextualize the information given through the professional experiences of plant breeders. The final chapters provide a useful reference on breeding the largest and most common crops. Up to date edition of this bestselling book incorporating the most recent technologies in the field. Combines both theory and practice in modern plant breeding. Updated industry highlights help to illustrate the concepts outlined in the text. Self assessment questions at the end of each chapter aid student learning. Accompanying website with artwork from the book available to instructors.

Russ B. Altman, A. Keith Dunker, Lawrence Hunter, 2010-09-01 The Pacific Symposium on Biocomputing PSB 2011 is an international multidisciplinary conference for the presentation and discussion of current research in the theory and application of computational methods in problems of biological significance. Presentations are rigorously peer reviewed and are published in an archival proceedings volume. PSB 2011 will be held on January 3-7, 2011 in Kohala Coast, Hawaii. Tutorials and workshops will be offered prior to the start of the conference. PSB 2011 will bring together top researchers from the US, Asia, Pacific and around the world to exchange research results and address pertinent issues in all aspects of computational biology. It is a forum for the presentation of work in databases, algorithms, interfaces, visualization, modeling and other computational methods as applied to biological problems with emphasis on applications in data rich areas of molecular biology. The PSB has been designed to be responsive to the need for critical mass in sub disciplines within biocomputing. For that reason it is the only meeting whose sessions are defined dynamically each year in response to specific proposals. PSB sessions are organized by leaders of research in biocomputing's hot topics. In this way the meeting provides an early forum for serious examination of emerging methods and approaches in this rapidly evolving field.

Human Heredity in the Twentieth Century Bernd Gausemeier, 2015-10-06 The essays in this collection examine how human heredity was understood between the end of the First World War and the early 1970s. The contributors explore the interaction of science, medicine and society in determining how heredity was viewed across the world during the politically turbulent years of the twentieth century.
