Sensing Vehicle Conditions for Detecting Driving Behaviors Jiadi Yu, Yingying Chen, Xiangyu Xu, 2018-04-18 This SpringerBrief begins by introducing the concept of smartphone sensing and summarizing the main tasks of applying smartphone sensing in vehicles Chapter 2 describes the vehicle dynamics sensing model that exploits the raw data of motion sensors i e accelerometer and gyroscope to give the dynamic of vehicles including stopping turning changing lanes driving on uneven road etc Chapter 3 detects the abnormal driving behaviors based on sensing vehicle dynamics Specifically this brief proposes a machine learning based fine grained abnormal driving behavior detection and identification system D3 to perform real time high accurate abnormal driving behaviors monitoring using the built in motion sensors in smartphones As more vehicles taking part in the transportation system in recent years driving or taking vehicles have become an inseparable part of our daily life However increasing vehicles on the roads bring more traffic issues including crashes and congestions which make it necessary to sense vehicle dynamics and detect driving behaviors for drivers For example sensing lane information of vehicles in real time can be assisted with the navigators to avoid unnecessary detours and acquiring instant vehicle speed is desirable to many important vehicular applications Moreover if the driving behaviors of drivers like inattentive and drunk driver can be detected and warned in time a large part of traffic accidents can be prevented However for sensing vehicle dynamics and detecting driving behaviors traditional approaches are grounded on the built in infrastructure in vehicles such as infrared sensors and radars or additional hardware like EEG devices and alcohol sensors which involves high cost The authors illustrate that smartphone sensing technology which involves sensors embedded in smartphones including the accelerometer gyroscope speaker microphone etc can be applied in sensing vehicle dynamics and driving behaviors Chapter 4 exploits the feasibility to recognize abnormal driving events of drivers at early stage Specifically the authors develop an Early Recognition system ER which recognize inattentive driving

events at an early stage and alert drivers timely leveraging built in audio devices on smartphones An overview of the state of the art research is presented in chapter 5 Finally the conclusions and future directions are provided in Chapter 6
